Description

Whole blood is collected from young healthy chickens (Mixed breed and mixed sex, 6 to 8 weeks of age). The blood is combined with Heparin (7500 units/ml) at a ratio of 1:250. The plasma is separated from the blood cellular components by centrifugation, bottled and frozen at

-20°C.

Physical State

Frozen liquid

Application Notes

Reportedly useful for protein purification

Packaging

Polypropylene bottles

Storage Temperature

-20 °C or below.

Shipping Conditions

Dry ice

Expiration

No expiration date determined

Product quality is guaranteed to meet Pel-Freez Biologicals' specifications for 1 year from the date of receipt by the customer as long as the product is stored in accordance with the indicated storage conditions.
